

A comprehensive solution specifically designed to meet product dispensing control needs through a user identifier. It can be applied to different environments including sports clubs, hotels or study or work centers.

The COMPENDIA system manages to automate all transactions made in these environments, offering total traceability in real time, making it possible to customize consumption possibilities.

## Technical features

- Centralized server that maintains comprehensive control of transactions.
- Access to the data from the central location or remotely.
- Communication with all sites in real time or periodically.
- Fast and accurate management of all services.
- The Vending Track version displays the load, accounting and status of the machines without actually visiting them.
